

## Marie-Sklodowska-Curie Actions - Doctoral Network

A training network on the design of precision therapeutics that target key glycan motifs implicated in cancer

implicalea in cancer

Newsletter 01 October, 2024

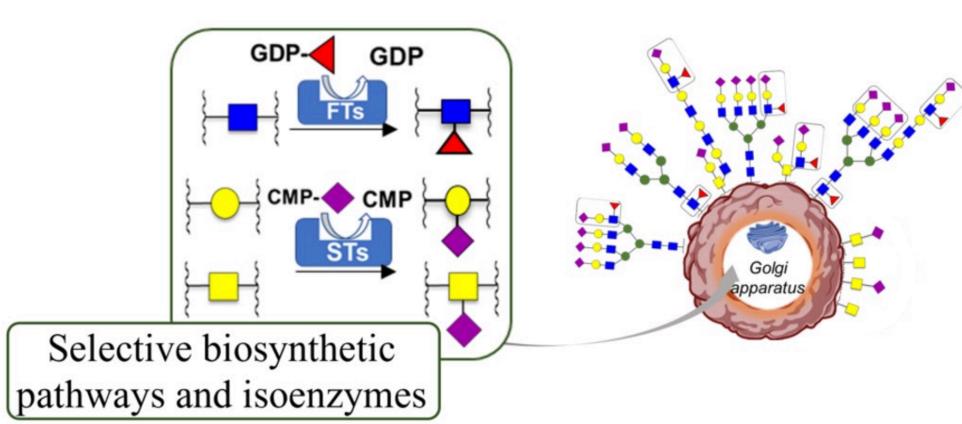

We are pleased to introduce you to **GlyCanDrug**, a doctoral network organized and supported under the **Horizon Europe - Marie Sklodowska-Curie Actions programme**.

The GlyCanDrug network aims to train ten outstanding doctoral candidates, shaping them into the next generation of glycoscientists.

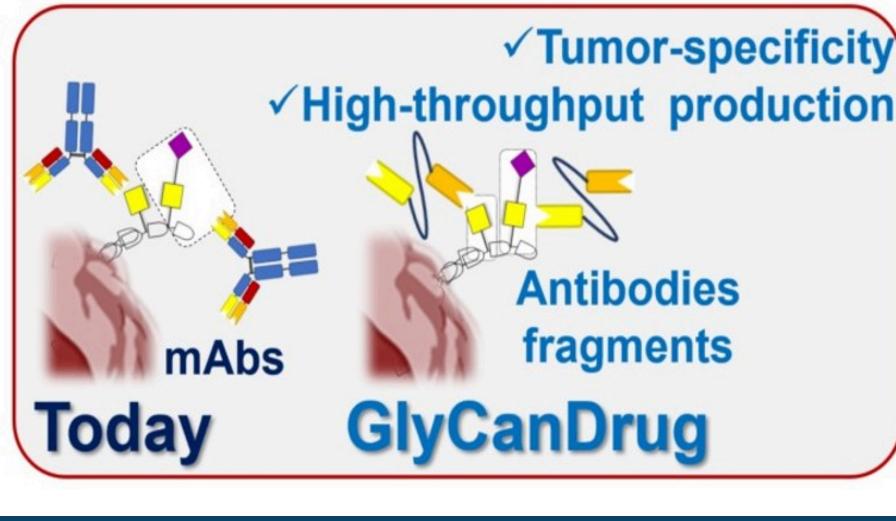

The research program envisions **approaching the cancer glycome** with two cohesive and complementary scientific objectives that have a common target, which are key cancer-associated glycans that tumors exploit to develop enabling cancer features.

These objectives are as follows:

• precise inhibition of the expression of cancer-associated glycans thus affecting their funcional role in cancer progression;

• development of cutting-edge tools that target those key cancerassociated glycans that are uniquely expressed on cancer cells.

The Network

## 1st Conference Meeting

Zaragoza, Spain

The Timeline

online
January, 2024

Stay tuned!

interviews with experts in the field of glycosciences.
